Xerox® Precise Color Management System

Color Management and Calibration Software for Xerox® VersaLink® C9000
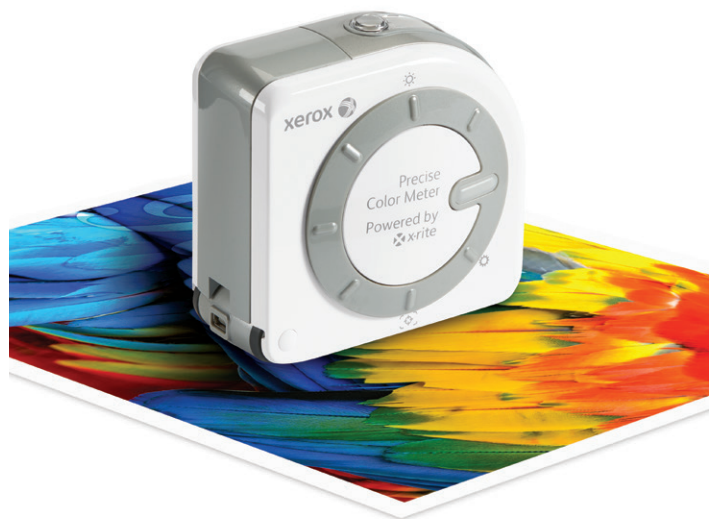

For graphic artists and color professionals, color matching is a critical task. The Xerox® Precise Color Management System adds critical color control capability through the combination of powerful software and the Xerox® Precise Color Meter powered by X-Rite.

Keep colors precise. Environmental conditions, such as temperature and humidity, and variations in paper types all affect a printer's ability to produce accurate color consistently. PCMS calibration quickly returns your VersaLink C9000 to its factory-new settings, ensuring the last print is just as brilliant as the first.

Emulate other devices. Use the Precise Color Management System to create custom color sets that emulate larger press equipment, allowing in-house creation of prepress proofs. With PCMS, you can quickly set/reset saved color profiles to keep your workflows efficient.

Measure colors precisely. Powered by industry-leader X-Rite, the Xerox® Precise Color Meter device calibrates your monitor and the VersaLink C9000 to match colors from swatch books or color tables, ensuring accurately matched screen-to-print colors (included with Xerox® Precise Color Management System).

XEROX® PCMS BENEFITS

- Get accurate, consistent results with professional-level color calibration
- Save time and money by controlling repeatable color
- Create fewer iterations of prepress proofs thanks to greater color accuracy that meets press color expectations
- Fine tune existing spot colors or create new, unique spot colors with the power of XPCMS

SYSTEM REQUIREMENTS

Apple® Macintosh®

- Intel Core® 2 Duo Processor with Powered USB Port
- Mac® OS X® 10.10.X through Mac OS X 10.14.X
- 2 GB RAM required and 2 GB of available disk space
- 1024 x 768 dpi resolution color monitor able to display thousands of colors
- Xerox® VersaLink C9000 Color Printer only
- Installation of the Xerox® VersaLink C9000 PostScript® Macintosh printer driver (This driver must be used to utilize Xerox® Precise Color Management System.)

Microsoft® Windows®

- Intel Core 2 Duo or AMD Athlon™ 64 X2 or better CPU with Powered USB Port
- Microsoft Windows 7 32 or 64 bit, Microsoft Windows 8 32 or 64 bit, Microsoft Windows 8.1 32 or 64 bit, Microsoft Windows 10 32 or 64 bit (with latest Service Pack installed)
- 2 GB RAM required and 2 GB of available disk space
- Xerox® VersaLink C9000 Color Printer only
- 1024 x 768 dpi resolution color monitor able to display thousands of colors
- Installation of the Xerox® VersaLink C9000 PostScript Windows printer driver (This driver must be used to utilize Xerox® Precise Color Management System.)
